

FOR IMMEDIATE RELEASE

Touché Technologies in FundingPost's "Top 50" Emerging Companies

Touché Tech places in top 10% of largest national competition

ORLANDO, FL October 20, 2008 – Touché Technologies, LLC, parent company of www.Motion4U.org, proudly announced today that it has been selected as "Top 50" in the *Pitching Across America*™ national emerging company contest. This 5th annual Funding Post competition was the largest national competition of its kind.

"It is obvious to see why Touché Technologies' exciting product stood out to our judges," said Joe Rubin, Director of Funding Post. "They have come up with a truly innovative technology, and we look forward to hearing a success story as they seek funding this year."

Touché Tech is the Orlando based creator of the OptiBurst™ 3-D input system for film, video game and broadcast content development. The OptiBurst™ system allows 3-D artists and animators to escape the flatland confines of mouse, keyboard, pen and puck by developing "in the air" in actual 3-D. This is accomplished with simultaneous 6 DOF (Degrees Of Freedom) and with the user's choice of absolute (pick and place) or relative (joystick style) performance. Users can control object movement and camera movement. In short, after nine years of development, the "flying" mouse concept is now a viable development tool. According to president and CEO, Lou Magill, "The traditional techniques of keyframing, path animation and procedural are 2-D based operations. OptiBurst™ is a true 3-D tool that allows the video game, film and broadcast industries to develop more creative ideas of higher quality in substantially less time and at significantly less expense. In addition, they now have the capability of incorporating truly organic motion in real time."

Over 300 entries in the Funding Post competition were judged by more than 130 venture capitalists and angel investors across the country. Each company's executive summary was rated by the judges on a scale of 1 – 10. According to the contest host, FundingPost.com (www.FundingPost.com), the "criteria consisted of several key points including: the professionalism of the written summary, current stage of development (customers, revenue), competitive advantage and need in the marketplace, feasibility for success, and whether the company is 'VentureWorthy™'." When the judges had completed their reviews, Touché Tech ranked 28th - putting it in the top 10%.

About Touché Technologies, LLC

Touché Technologies, LLC is a high-tech development company focused on the interactive entertainment, film and broadcast industries. Its flagship program, the OptiBurst™ 3-D development interface, allows 3-D artists and animators to create and animate at the highest level with significantly less time and expense than is possible with conventional tools. OptiBurst™ currently works within "Maya" (by Autodesk), "After Effects in C4" (by Adobe) and the "Dna Ogre" render engine. OptiBurst™ is marketed by Motion4U, LLC, a subsidiary of Touché Technologies, LLC.
